

General Recommendations for the Cleaning and Maintenance of Porcelain Wall and Floor Tile

Glazed Tiles

Products should be cleaned routinely with an all-purpose, non oil-based household or commercial cleaner. The product chosen should also be grout joint cleaning compatible. The type of product may vary depending on the tile application and use. A multipurpose spray cleaner, which removes soap scum, hard water deposits, and mildew designed for every day use, can be used on wall tile areas in residential baths and showers.

The entire area should be cleaned and scrubbed with cleaner solution through the use of a cotton mop, cloth, sponge, or non-metallic brush. The entire area should be rinsed with clean water to remove any cleaning solution residue. Remember that you should sweep or vacuum floor areas prior to cleaning to remove any dust or debris. Routine cleaners should never contain acids or ammonia. Acids can damage the grout and the glazed surface of the tile, and ammonia can discolor the grout.

Unglazed Tile

Clean routinely with concentrated tile cleaners that have a neutral pH for safe regular use. The product chosen should also be compatible with cleaning the grout joints at the same time.

Glass Tiles

For routine cleaning, use any non-abrasive cleaning compound recommended for either glass or tile

Removal of Sealers/Waxes/Floor Finishes

For the removal of a topical sealer or floor wax from a ceramic tile you should use a Tile Sealer & Adhesive remover. Always test a small area first. Apply a liberal amount of undiluted sealer & adhesive remover to a manageable area. Allow setting without drying until coating or residue softens. Reapply if necessary until sealer softens and can be removed. If necessary, agitate with white nylon scrub pad. Wipe up the residue with a cotton towel or sponge. Rinse thoroughly with clean water. Do not use on natural stone products.
